PROFESSIONAL SUMMARY

Motivated MCA graduate with hands-on full stack development experience across Python, Flask, React JS, Angular, .NET Core, and MySQL. Proven ability to build responsive web applications, robust REST APIs, and normalized database solutions with strong problem-solving skills.

EDUCATION

Master of Computer Applications (MCA)

Graduated: 2025

Vignan's Foundation for Science, Technology & Research | CGPA: 7.33/10

TECHNICAL SKILLS

Python Flask .NET Core MySQL React JS Angular Redux Toolkit RESTful APIs
Object-Oriented Programming (OOP) Git & GitHub VS Code Visual Studio Vite

PROFESSIONAL EXPERIENCE

Full Stack Development Intern

Nov 2025 – May 2026

Inspiredge IT Solutions

- Developed and maintained full-stack web application modules using Python, Angular, .NET Core, and MySQL.
- Designed robust backend architecture and secure REST APIs to support scalable application functionality.
- Engineered responsive user interfaces with comprehensive client-side data validation and error handling.
- Managed normalized MySQL database schemas, authored optimized SQL queries, and implemented efficient CRUD operations.
- Collaborated actively in Agile sprint ceremonies, technical code reviews, debugging, and quality assurance.

KEY PROJECTS

Library Management System

Technologies: React 19, Redux Toolkit, React Router v7, Axios, REST API, Vite, Vercel

- Built and deployed a dynamic library platform on Vercel backed by a cloud-hosted REST API back-end.
- Implemented global state using Redux Toolkit to manage real-time favorites with localStorage offline persistence.
- Engineered client-side search, multi-faceted filtering, and sorting algorithms for responsive catalog exploration.
- Developed complete CRUD workflows and protected routes using React Router v7 for role-based route security.
- Abstracted API interactions via environment-aware Axios services and integrated interactive animated UI elements.

Customer Relationship Management (CRM) Database System

Technologies: MySQL, SQL, Relational Database Design

- Designed a normalized relational database schema managing customer records, sales leads, and financial transactions.
- Authored complex stored procedures, database triggers, and optimized SQL queries for business reporting.
- Enhanced query performance through indexing and enforced strict referential integrity constraints.

ATM Simulator

Technologies: Python, OOP, Data Structures

- Developed an interactive console banking system applying robust Object-Oriented Programming (OOP) architectures.
- Implemented cash withdrawal, deposit validation, dynamic balance updates, and transaction statement logging.
- Integrated automated security threshold lockouts disabling user access after consecutive invalid login attempts.

CERTIFICATIONS

- Python – Codegnan Training Institute
- MySQL – Codegnan Training Institute
