

TAMMA NIVED REDDY

Full Stack Developer (Python | Django | React | Node.js | .NET Core)

Hyderabad, Telangana | +91 77026 18534 | nivedreddy6@gmail.com

GitHub: github.com/Nivedreddy6 • LinkedIn: [linkedin.com/in/nived-reddy-97a986257/](https://www.linkedin.com/in/nived-reddy-97a986257/)

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience designing, developing, and shipping production web applications across Python, Flask, React, and MySQL. Proven track record delivering complete end-to-end solutions—from relational database architecture to scalable REST APIs and responsive modern user interfaces. Experienced in Agile team delivery, owning features from requirements through code reviews, and resolving production issues.

EDUCATION

Master of Computer Applications (MCA) – Vignan's Foundation for Science, Technology & Research

Graduated: 2025

CGPA: 7.33/10

TECHNICAL SKILLS

Languages & Core: Python, JavaScript (ES6+), C#, SQL, OOP, Data Structures
Backend & APIs: Django, DRF, Flask, Node.js, Express.js, .NET Core, REST APIs, WebSockets, RBAC
Frontend & Mobile: React.js, React Native, Angular, Redux Toolkit, React Router, HTML5, CSS3, Vite
Databases & ORM: PostgreSQL, MySQL, SQLite, SQLAlchemy, Relational Modeling (3NF), Stored Procedures
Tools & Workflow: Docker, Git, GitHub, VS Code, Visual Studio, Vercel, Postman, Agile/Scrum, Code Reviews

PROFESSIONAL EXPERIENCE

Full Stack Development Intern – Inspiredge IT Solutions

Nov 2025 – May 2026

- Engineered employee-management modules using .NET Core, Angular, and MySQL, taking features through live deployment.
- Designed and built secure RESTful APIs and service layers in .NET Core with role-based authentication and data access.
- Built Angular reactive forms, reusable dashboard components, and client-side validation routines, improving workflow data integrity.
- Developed and tuned MySQL stored procedures, triggers, and queries supporting transactional CRUD operations and reporting.
- Actively participated in Agile sprint planning, code reviews, cross-functional debugging, and QA testing for stable releases.

KEY PROJECTS

Pulse Workspace – Enterprise Multi-Tenant SaaS Platform

Technologies: Python, Django 6, Django REST Framework (DRF), PostgreSQL, Docker, Swagger/OpenAPI

- Architected and deployed a multi-tenant SaaS platform in Django 6 & DRF enforcing strict tenant data isolation at ORM layers.
- Engineered granular RBAC with custom DRF permission guards, preventing unauthorized leaks and privilege escalation.
- Developed an immutable audit logging engine capturing user mutations, IP telemetry, and role transitions for enterprise SOC2 compliance.

ZapBite – AI-Powered Food Delivery & Restaurant Logistics Platform

Technologies: React 19, Node.js, Express 5, WebSockets, Tailwind CSS v4, Google Maps API, Gemini AI, Chart.js

- Built a full-stack food delivery ecosystem with WebSockets powering 4 synchronized real-time portals (Customer, Kitchen, Rider, Admin).
- Integrated GPS telemetry with live polyline routing, dual-phase tracking, dynamic ETA countdowns, and Chart.js analytics.
- Implemented BiteBot conversational concierge using Google Gemini 2.5 Flash with menu grounding, and ZapPay SMS OTP engine.

Job Sphere Studio – Recruitment & ATS Platform

Technologies: Python 3.12, Flask 3.0, React 19, Vite, SQLite, SQLAlchemy, REST APIs, SMTP Engine

- Built an end-to-end ATS covering relational database modeling, REST API architecture, and React 19 frontend.
- Implemented a 5-stage interactive ATS Kanban pipeline (Applied, Screening, Interview, Offer, Hired) with real-time updates.
- Automated interview scheduling and communications via Python smtplib with calendar-ready HTML invites, RBAC, and secure sessions.

Library Management System

Technologies: React 19, Redux Toolkit, React Router v7, Axios, REST API, Vite, Vercel

- Architected a responsive SPA with centralized state via Redux Toolkit, localStorage persistence, and protected routing.
- Implemented real-time debounced catalog search with multi-parameter filtering and full CRUD workflows for book inventory and members.
- Integrated Axios for asynchronous REST communication with client-side error handling, confirmation modals, and Vercel CI/CD.

Customer Relationship Management (CRM) Database System

Technologies: MySQL, SQL, Relational Database Design

- Designed a normalized 3NF relational database schema managing customer records, order lifecycles, and sales transactions.
- Authored automated database triggers and optimized stored procedures to streamline transactional reporting and data consistency.

ATM Simulator

Technologies: Python, OOP, Data Structures

- Developed an interactive console banking system applying robust Object-Oriented Programming (OOP) architectures and data structures.
- Implemented secure PIN authentication, dynamic balance updates, deposit validation, and detailed statement transaction logs.
